

# SIRIUS-1250/1750/2500

Large-Size Vertical Machining Center in Bridge Type Design

# LARGE-SIZE VERTICAL MACHINING CENTER IN BRIDGE TYPE DESIGN

## SIRIUS-1250/1750/2500 with Bridge Type Design

SIRIUS-1250/1750/2500 are large bridge-type vertical machining centers with precision feed drive and high-performance spindle. These machining centers provide a total solution from tool selection to product completion-making them ideal for your extra-size mold applications where quality is essential.

# HIGH-QUALITY MACHINING FOR EXTRA-SIZE MOLD APPLICATIONS

## Large-Size Mold Machining

**Hwacheon's extra-size bridge type vertical machining centers guarantee to enhance the quality of your large mold applications, such as large display frame, automotive and aerospace parts.**

The SIRIUS series of large size vertical machining centers use powerful built-in motor spindles and high-speed, high precision milling heads complemented by Hwacheon's proprietary Oil-Jet cooling system-to guarantee consistent strong roughing performance and provide high quality product result hours after hours of high speed machining. Each SIRIUS vertical center is designed using 3D simulation FEM analysis to achieve structural rigidity which can translate to quality product results; while the Hwacheon designed machining software components enhance safety and work efficiency in your factory. The machines are configurable with many different options so that they can integrate perfectly to your work environment and application.

**Symmetrical portal structure for extra stability**

The symmetrical portal structure is the ideal design for distributing vibration, the upper weight, and the heat evenly throughout the entire frame. This characteristic is the base for the machine to maintain its feed precision even after hours of continuous machining; the distance between the Y-axis and the contact point of the tool has been minimized to enhance the overall rigidity and machining precision.

**Integrated Motor Spindle**

In Hwacheon temperature controlled clean room facilities, where this Super Precision High Speed Spindles are assembled, only the most experienced and skilled engineers are allowed to produce at highest industry and quality standards a spindle worth to be named Made by Hwacheon.

**Oil-Jet Cooling**

The Oil-Jet cooling and the Jacket Cooling designs have been perfected by Hwacheon's experience and know how in building high quality spindles. These unique yet highly effective cooling systems minimize the thermal displacement during prolonged machine operations.

○ Cooling oil in

○ Cooling oil out

○ Motor housing radiation (Jacket circulated)

○ Front bearing radiation (Jacket circulated)

# MACHINING SOFTWARE

## The Hwacheon Machining Software Components

The Hwacheon's developed machining software monitors different variables related to the work environment and machining conditions automatically makes adjustments for best quality results and optimum work efficiency.

## + RELIABILITY

### HTDC (HSDC + HFDC)

Hwacheon Thermal Displacement Control System (HSDC + HFDC)

HTDC integrates the Hwacheon Spindle Displacement Control system and the Frame Displacement Control System.

### HFDC

Hwacheon Frame Displacement Control System

HFDC is equipped with highly sensitive thermal sensors located at various locations where thermal activity is suspected; monitoring and correcting displacement.

### HSDC

Hwacheon Spindle Displacement Control System

When the spindle rotates at high speed, the centrifugal force drives the taper to expand, causing errors in Z axis. HSDC constantly monitors the temperature at each spindle region and makes optimal prediction for thermal displacement. The system then makes necessary adjustments and effectively minimizing thermal displacement.

#### Static displacement compensation

The HSDC system corrects the Z-axis error occurring from the taper expansion during the spindle's high speed rotation.

# PRECISION +

## HTLD

### Hwacheon Tool Load Detect System

HTLD constantly monitors the tool wear to prevent accidents, which may occur from a damaged tool and help to stop tool wear from deteriorating the workpiece.  
(The load is measured every 8 msec to ensure accuracy)

## HECC

### Hwacheon High-Efficiency Contour Control System

HECC offers an easy-to-use programming interface for different work-pieces and different processing modes. The system provides a precise, custom contour control for the selected workpiece, while prolonging the life of the machine and decreasing process time. The customizable display provides real-time monitoring and quick access.

- Program offers different options for different cutting speed and accuracy for roughness and shapes.
- The customizable display provides real-time monitoring and quick, easy access.
- The program is executable on an existing NC DATA system and works with the G Code system.

## OPTIMA

### Cutting Feed Optimization System

OPTIMA utilizes an adaptive control method to regulate the feed rate in real time, to sustain the cutting load during a machining process. As a result the tools are less prone to damage and the machining time is reduced.

# SPEED +

# USER FRIENDLY DESIGN, A WIDE RANGE OF OPTIONAL FEATURES

SIRIUS-1250/1750/2500 vertical machining centers offer user friendly design and a wide variety of useful options for practical applications, so you can concentrate on what you do best: creating quality products-without losing your valuable time to the worries of machine failure and safety. A wide variety of performance enhancing options are available for faster, more precise machining.

## **Auto measurement system (Option)**

When the machine begins to work, the measurement system automatically measures the work-piece and the tool, and makes necessary adjustment. This system saves machining time and guarantees high quality result every time regardless of the machinist's skill and because the system constantly monitors the tools and the workpiece for any abnormality, potential machine-related accidents can be prevented. The system integrates perfectly with other equipment to make your automated production line more productive and efficient.

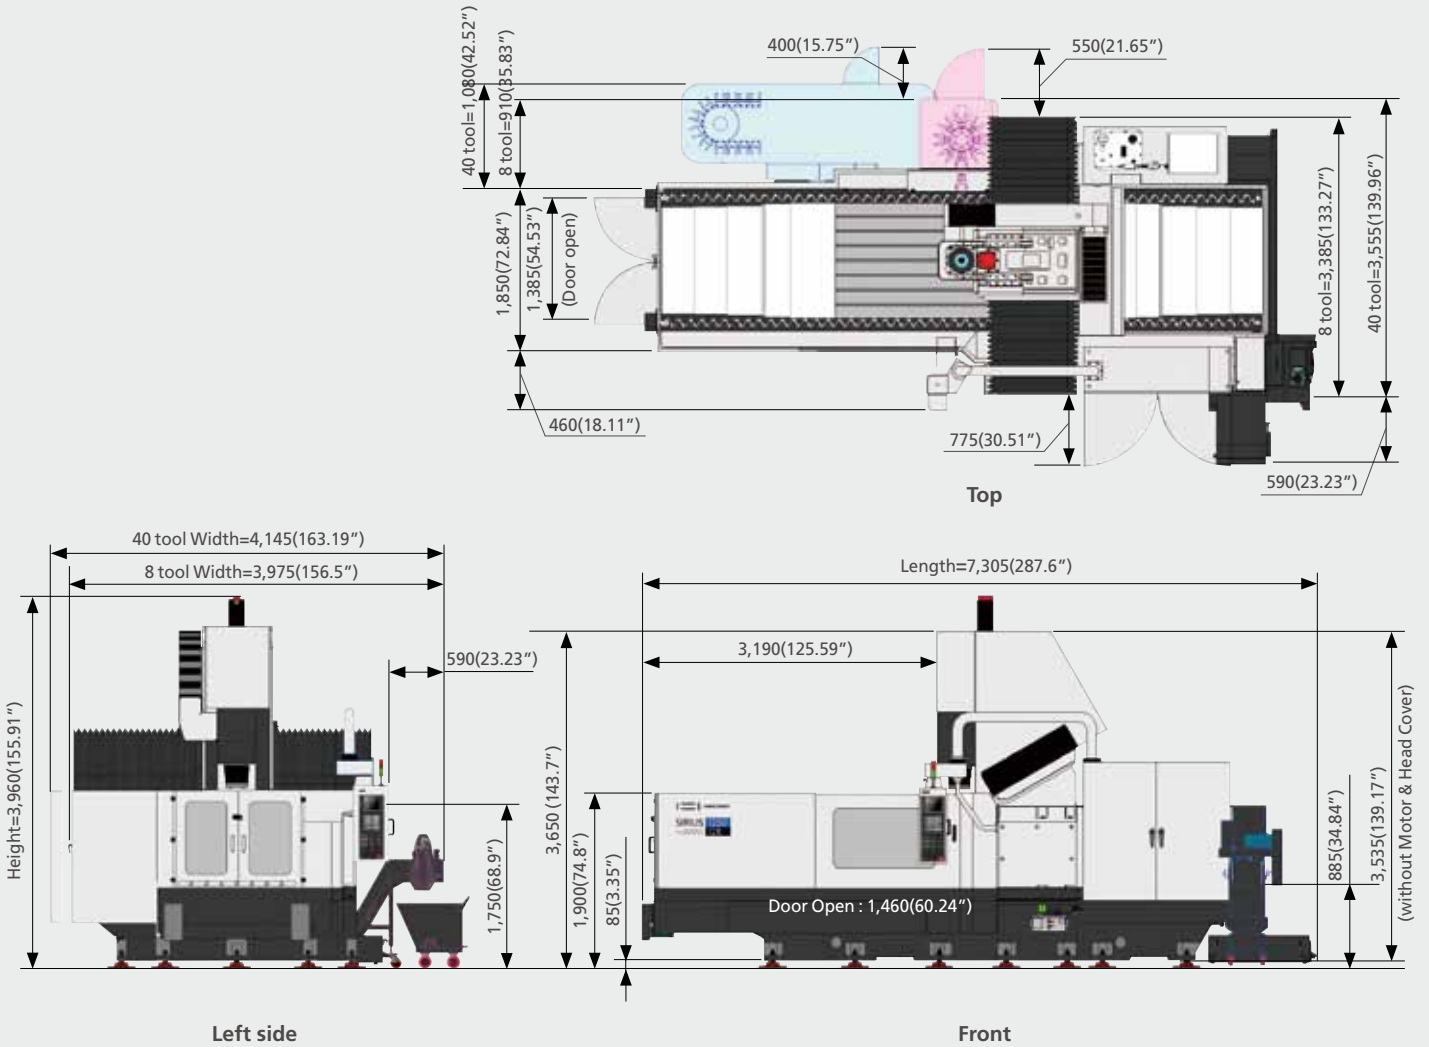

## **Full-enclosure exterior cover (Option for SIRIUS-1750 only)**

The exterior cover envelops the machine to keep the operator safe from chips, lubricant, dust and helps to maintain clean work environment. The smooth-operating slide door is easily accessible even from the opposite side when setting up a large workpiece.

## NC Specifications [Fanuc 31i-A]

※ — : Not available S : Standard O : Option

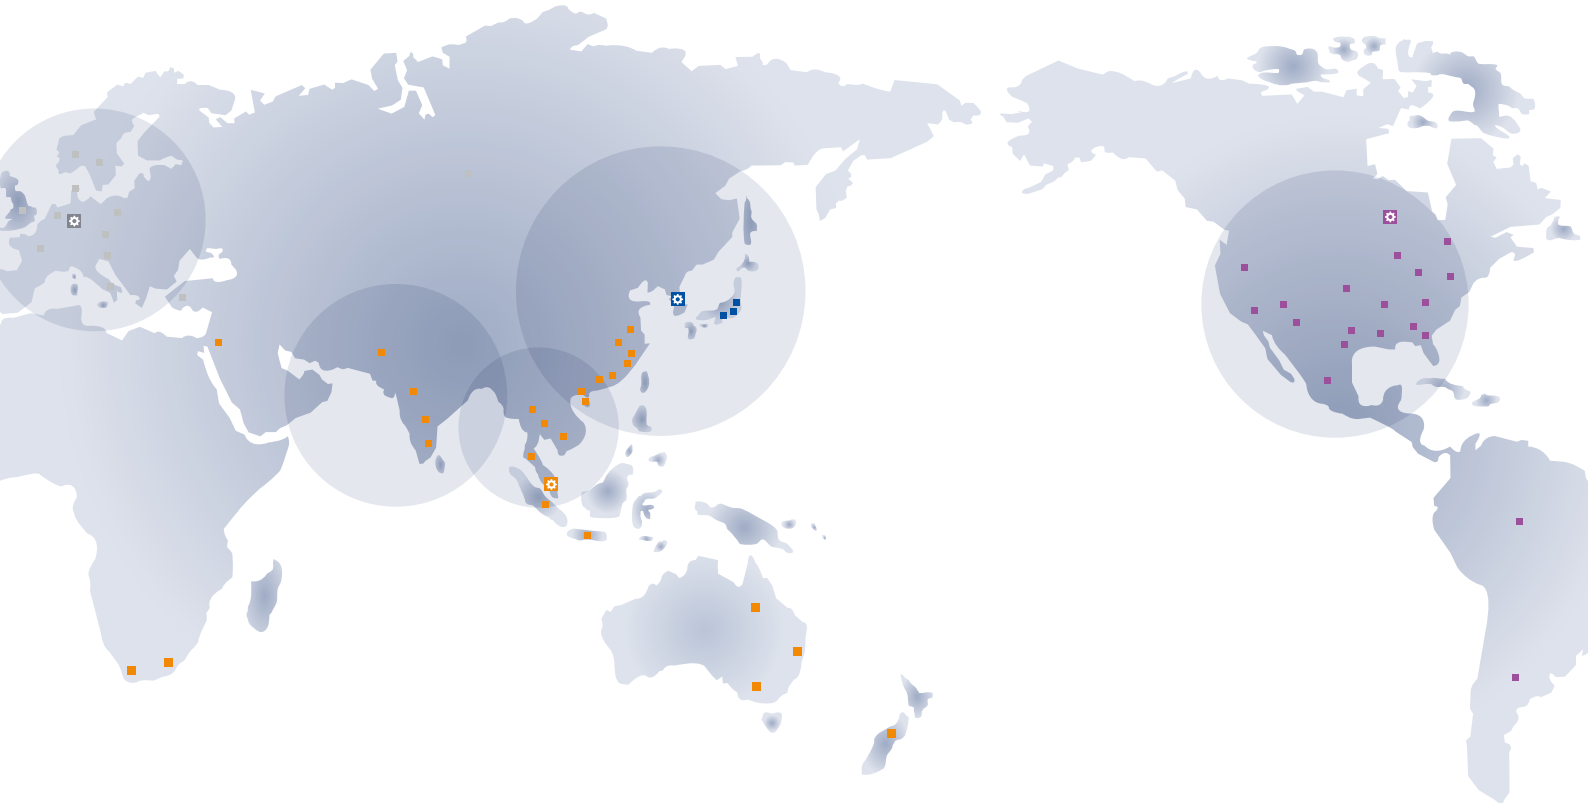

| ITEM  | SPECIFICATION   |   |
|---|---|---|
| <b>Controlled axis</b>  |   |   |
| Controlled axis   | 3-Axes  | S |
| Controlled axis   | 5-Axes (Max.)   | O |
| Simultaneously controlled axes  | 3-Axes  | S |
| Simultaneously controlled axes  | 4-Axes (Max.)   | O |
| Least input increment   | 0.001mm, 0.001deg,<br>0.0001inch                              | S |
| Least input increment 1 / 10  | 0.0001mm, 0.0001deg,<br>0.00001inch                           | O |
| inch / metric conversion  | G20, G21  | S |
| Store stroke check 1 / 2  |   | S |
| Mirror image  |   | S |
| Store pitch error compensation  |   | S |
| Backlash compensation   |   | S |
| <b>Operation</b>  |   |   |
| Automatic & MDI operation   |   | S |
| DNC operation by memory card  | PCMCIA card is required                                       | S |
| Program number search<br>/ Sequence number search                                       |   | S |
| Dry run, Single block   |   | S |
| Manual handle feed / Feed rate  | 1 Unit / x1, x10, x100  | S |
| <b>Interpolation function</b>   |   |   |
| Positioning / Linear interpolation /<br>Circular interpolation /<br>Dwell (Per seconds) | G00 / G01 / G02,G03 / G04                                     | S |
| Helical interpolation   | Circular interpolation plus<br>Max.2axes linear interpolation | S |
| Nano smoothing  |   | O |
| Reference position return check /<br>Return   | G27 / G28, G29  | S |
| 2nd reference position return   | G30   | S |
| Skip  | G31   | S |
| NURBS interpolation   |   | O |
| <b>Feed function</b>  |   |   |
| Rapid traverse override   | F0, F25, F50, F100  | S |
| Feedrate (mm / min)   |   | S |
| Feedrate override   | 0 ~ 150%  | S |
| Jog feed override   | 0 ~ 4,000mm/min   | S |
| Override cancel   | M48, M49  | S |
| <b>Program input</b>  |   |   |
| Tape code   | EIA RS244 / ISO840  | S |
| Optional block skip   | 1ea   | S |
| Program number  | O4-Digits   | S |
| Sequence number   | N8-Digits   | S |
| Decimal point programming   |   | S |
| Coordinate system setting   | G92   | S |
| Workpiece coordinate system   | G54 ~ G59   | S |
| Workpiece coordinate system preset  |   | O |
| Addition of workpiece coordinate pair   | 48ea  | S |
| Addition of workpiece coordinate pair   | 300ea   | O |
| Extend program edit function  | Copy / move/..  | S |
| Manual absolute on and off  |   | S |
| Chamfering / Corner R   |   | S |
| Sub program call  | 10 folds nested   | S |
| Custom macro B  |   | S |
| Addition of custom macro common<br>variables  | #100 ~ #199, #500 ~ #999                                      | O |
| Canned cycle for drilling   |   | S |
| Small-hole peck drilling cycle  |   | O |
| Automatic corner override   |   | O |
| Feedrate clamp based on arc radius  |   | S |
| Scaling   |   | O |
| Programmable data input   | G10   | S |
| Coordinate system rotation  |   | S |

| ITEM   | SPECIFICATION  |   |
|--|--|---|
| Programmable mirror Image  |  | O |
| Tape format for fanuc series 15  |  | O |
| Manual guide i   |  | O |
